Product Description

You are welcomed to come to our factory to buy the latest selling, low price, and high-quality Rubber Disc Return Idlers, Xin Aneng looks forward to cooperating with you.

Rubber Disc Return Idlers are constructed from abrasion resistant, synthetic rubber discs. Generally used for applications where sticky material builds upon traditional steel idlers.

The rubber disc return idlers are an essential component in conveyor systems. They are designed with high-quality rubber discs that offer excellent durability and resistance to wear and tear.

These idlers play a crucial role in facilitating the smooth return of the conveyor belt, ensuring efficient material transportation. The rubber material used in the discs provides good traction and reduces the risk of belt slippage.

The design of the rubber disc return idlers is engineered to handle heavy loads and provide stable support. They are easy to install and maintain, contributing to the overall reliability and longevity of the conveyor system.
